Building on our highly successful System One humidification, Philips Respironics introduces an additional humidification solution that enhances performance, flexibility and comfort. With the System One Heated Tube, we now have a solution for exceptional patient comfort.

There’s no heated debate
System One with Heated Tube provides patients with:
• Air temperature control
• Improved humidification
• Rainout protection
There’s little debating, the System One Heated Tube, combined with proven System One humidification, is a win-win scenario for patients and providers alike.

Comfort through flexibility
Highly-adaptable System One humidification plus a Heated Tube option provide more ways for patients to get comfortable.

Provided for your reference by cpapXchange.com
Get warm and cozy with System One Heated Tube

It’s just the right combination of warmth and humidity

The System One device incorporates a room temperature and humidity sensor with a temperature sensor at the end of the Heated Tube to deliver the selected level of humidity to the patient while providing protection against rainout. As a result, higher levels of humidity can be achieved for patients who could benefit from humidification.

With System One Heated Tube, you get increased humidification plus the rainout protection you’ve come to trust and expect from Philip Respironics.

More than a number

Humidification is now more personalized with System One Heated Tube. It allows patients to select their preferred humidity and temperature levels throughout the night, regardless of changing room conditions.

A top-notch design

System One Heated Tube was designed with:
• top-mounted connection for easy access
• durable, simple one-click connection
• 270-degree swivel mount
